

Product Overview

FishVue Vantage is a mid-level, low-cost electronic monitoring (EM) device deployable on small to medium size vessels. It is designed to support multiple High Definition cameras, with 2-way cellular connectivity to enable real-time access from shore to check system information and view vessel activity through Archipelago's FishVue Fleet web-based tool.

Vantage is a full-featured EM system that meets the requirements of all global EM programs and provides data outputs compatible with Archipelago's world-leading data review software, FishVue Interpret. Paired with Archipelago's FishVue AI platform, Vantage allows for an end-to-end EM solution with high-quality data collection, cutting-edge AI tools and customized data analysis for all gear types.

Product Features

- Supports multiple high definition IP cameras
- On-board vision-based AI tools
- 2-Way Connectivity for remote updates and data transmission
- Cellular connectivity
- Satellite connectivity capable
- Internal or External GPS capability
- Analog sensor inputs
- Digital sensor inputs
- RFID sensor inputs
- Removable hard drive
- Temperature rated from -10°C to 60°C
- Tamper evident
- 12-36v DC power 110/220v AC power
