

## Directions:

Install LIME with a clear view of the sky and away from large electronics. LIME is waterproof, but for best performance it should be protected from direct spray and high-pressure washdowns.

\* Exact sensor types, number and combinations will vary depending on your fishery. If you have any questions about sensors, please contact [techsupport@archipelago.ca](mailto:techsupport@archipelago.ca)

**NOTE:** Earlier generations of LIME connected directly to sensor wires using WAGO snap connectors. The updated LIME housing shown here uses sealed connectors. If you are upgrading an older LIME unit or using existing (legacy) sensors/wiring, Archipelago will provide an adapter cable to connect the legacy wiring to the updated housing. Make all WAGO connections in a dry environment, WAGO connectors are not waterproof.
